MEMORANDUM

SUBJECT: Steelcote Facility - St. Louis, Missouri  
Addendum #4 - Monitoring Well Abandonment

FROM: Harry Gabbert  
RCRA/GEOL 

TO: Cynthia Hutchison  
RCRA/RCOM

As requested, I have reviewed the document titled " Addendum #4 To Plan of Study, Steelcote Facility, St. Louis, Missouri" submitted by Shannon & Wilson, Inc. for the Steelcote facility and dated August 14, 1995. The purpose of the additional work described in this addendum is to address the abandonment of existing monitoring wells at the site in accordance with Missouri state requirements. Attached to the addendum is a signed Variance Request Form from the State of Missouri.

Details given in the monitoring well abandonment procedures are acceptable and appear to meet state requirements. I recommend approval of Addendum #4. In addition, Steelcote states that EPA will be given 14 days notification prior to field work. I would be glad to oversee part of the abandonment procedures if travel arrangements could be made. In any event, EPA will receive a report detailing the activities and a copy of the required well abandonment report which will be filed with the state upon completion.

If you have additional comments and/or questions, please contact me at 7652.
